Note: the clinical conditions included in this table are placed here as a way of separating the conditions into two tables and does not imply a formal definition of "systemic rheumatologic health conditions"

BMD = bone mineral density; CTD-ILD = connective tissue disease-intersstitial lung disease; HCU= Health care utilization; LVV=Large vessel vasculitis; SLE = Systemic Lupus Erythematosus;

1. Osteoporosis: core set depends on focus of trial, 3 core domains for randomized trials where prevention of rapid bone loss is the primary aim, 4 core domains for randomized clinical trials of therapies for treating high risk patients for osteoporotic fractures
2. BMD measured at 2 sites: hip and spine
3. If impact of symptoms is specified, these would fall under Impact
4. Mandatory in specific circumstances: these domains should be measured in trials targeting either or all these symptoms.
5. Organ systems named to be mandatory in specific circumstances: mucocutaneous, eye, central nervous system, vascular, musculoskeletal, gastrointestinal.
6. Reporting of adverse events (including death) is mandatory in trials
