FORMULATION OF DRAFT CORE DOMAINS AND THEIR DETAILED DEFINITIONS- RESULTS

WORKING GROUP:

This report is designed for working groups to complete, documenting how decisions were made on the draft Core Domain Set. After narrowing the list to domains that Patient Research Partners and other collaborators have deemed critically important, the working group will review all available evidence – Delphi results, qualitative findings, and literature search outcomes – to determine which domains should be core (mandatory) in all relevant studies.

1. **Alignment of Work Plan with Domain Prioritization – OMERACT Onion**
   Reflecting on the working group's domain prioritization process, please address any changes between the original work plan outline and the final domain prioritization.

2. **Decision-Making Process for Draft Core Domain Set**

2.1 Summary of Approach: Describe the working group's steps to review and analyze evidence from Delphi results, qualitative data, and literature findings in assessing each domain's relevance.

2.2 Evidence Integration: Explain how each type of evidence contributed to the decision-making process.

2.3 Debates and Resolutions: Summarize any key points of debate or differing opinions within the working group and explain how these were resolved.

2.4 Criteria for Decisions: Outline any specific criteria or frameworks used to prioritize domains.
